

## NEXTracker Mounting Solution: First Solar Series 5 Modules

As the leading solar tracking company, NEXTracker partners with module manufacturers to bring world-class PV solutions to our customers. Building on the balanced design of our award-winning NX Horizon™ self-powered tracker, NEXTracker introduces advanced mounting solutions to support a wide range of module types. Flexible and adaptable, NX Horizon is now optimized and qualified for First Solar Series 5™ thin film modules to offer customers ultimate performance and reliability.

### FEATURES AND BENEFITS

NEXTracker's First Solar Series 5 mounting solution is simple and innovative. With our easy-to-install solution, three laminates are factory bonded to a pair of mounting rails to form a complete assembly. The assembly mounts to the tracker in one easy step, reducing installation time for our customers. Additional features and benefits include:

- Secure module mounting, with minimal materials and installation costs
- Fast and easy installation, with self-aligning brackets and module installation without fixtures, jigs, or measuring
- High shipping density
- Low-profile mounting prevents module shading
- A variety of row layout configurations for maximum site flexibility
- NX patented self-grounding capability with time and cost savings
